

Raghav Bhati

+91 9460730125 | godkode@godkode.xyz | godkode.xyz | github.com/godkode69

EDUCATION

Poornima University

Bachelor of Computer Applications — CloudTech and DevOps

Jaipur, Rajasthan

Aug. 2025 – May 2028

EXPERIENCE

Open Source Contributor

Jan. 2024 – Present

GitHub

- SideX (Code Editor)
 - * Implemented markdown preview by adding a custom webview class
 - * Resolved Git Bash detection scoping bug on non-Windows platforms causing build failures
 - * Fixed build formatting issues
- manga-app (Electron App)
 - * Implemented a file naming system for downloaded manga chapters
 - * Reduced unnecessary background logging
- Zen Browser (Web Browser)
 - * Fixed a bug causing AI features to appear in search context menu even when disabled
- 92lr's Digital Showcase (Portfolio)
 - * Fixed CSS theme issues in a developer portfolio built with React and Tailwind CSS
- The Judge From Hell (Portfolio)
 - * Fixed CSS styling bugs in a portfolio website built with HTML/CSS

TECHNICAL SKILLS

Languages

- **JavaScript / TypeScript** — Primary languages for web, backend, and tooling
- **Python** — Scripting, machine learning, and automation
- **Dart** — Cross-platform mobile app development with Flutter
- **Rust / Go / C** — Systems programming and performance-critical tooling

Frontend & Frameworks

- **Next.js / React** — Modern frontend with SSR, App Router, and server components
- **Flutter** — Cross-platform mobile UI development
- **VitePress** — Static site generation for documentation
- **HTML / CSS / Tailwind** — Markup, styling, and utility-first CSS

Backend & Runtime

- **Node.js** — Server-side JavaScript runtime for APIs and tooling
- **Discord.js** — Discord bot development with slash commands and events
- **Electron / Tauri** — Desktop application packaging and distribution

ML & AI

- **PyTorch** — Deep learning model training and transfer learning
- **MediaPipe / OpenCV** — Real-time computer vision and hand tracking
- **CLIP / EfficientNet** — Zero-shot classification and image classification backbones

- **ONNX** — Model export for client-side web inference

Databases

- **MongoDB** — NoSQL document database for APIs and analytics
- **SQLite** — Embedded database for desktop and local storage
- **Supabase** — Cloud-hosted Postgres with auth and real-time subscriptions

Infrastructure & DevOps

- **Linux / Git / Docker** — Version control, containerization, and server management
- **AWS / GCP / Azure** — Cloud compute, storage, and deployment services
- **Vercel / Cloudflare** — Frontend hosting, edge functions, and CDN
- **GitHub Actions / CI/CD** — Automated testing, building, and deployment pipelines

PROJECTS

DorC | *Python, PyTorch, EfficientNet, CLIP, Next.js* 2026 – Present

- Built an open-source image classification model with 108 classes across mammals, birds, reptiles, insects, and marine animals
- Trained EfficientNet-B0 backbone with transfer learning achieving 97.2% accuracy on 200,000+ images
- Integrated CLIP zero-shot classification for automated data curation and image scraping pipeline
- Exported model to ONNX and built a Next.js frontend with client-side WASM inference
- Implemented incremental training to add new classes without retraining from scratch

Open Gestures | *Python, MediaPipe, OpenCV* Apr. 2026 – Present

- Built a real-time gesture-based input system that maps hand gestures to system actions using MediaPipe hand landmark detection
- Processed live video feed at 30+ FPS with sub-100ms gesture-to-action latency
- Designed a modular gesture-action mapping architecture for easy extensibility

Fabric API | *Node.js, MongoDB, Vercel* May 2026 – Present

- Built a RESTful API serving real-time statistics and command data for a Discord bot with 100000+ users
- Designed MongoDB schemas for command metadata and usage analytics
- Automated deployments via GitHub Actions to Vercel with zero-downtime updates

Fabric Docs | *VitePress, TypeScript* May 2026 – Present

- Built a VitePress documentation site with live API integration for command docs and bot statistics
- Integrated Fabric API to dynamically render command references and usage metrics

Waveyy | *Next.js, React, Supabase, Tailwind CSS* 2025 – Present

- Built a premium music streaming web app with JioSaavn API integration for browsing and playing millions of tracks
- Implemented smart search with real-time results, custom playlists, and play history syncing
- Designed a modular UI with glassmorphism, smooth transitions, and Discord Rich Presence integration

Flame.org | *Node.js, Discord.js v14* 2024

- Built a modular Discord bot template with slash commands, event handler, and cooldown system
- Designed a command handler architecture for easy extensibility with built-in reload capability

Boolean Equation Visualizer | *Electron, Node.js, SVG* Sep. 2025

- Built a desktop app that parses boolean expressions and generates dynamic SVG-based logic gate diagrams
- Implemented rule-based expression parser with real-time circuit visualization
- Developed and shipped within 48 hours for an Engineer's Day hackathon

Gallerio | *Dart, Flutter* 2026

- Built a cross-platform mobile application using Flutter with 9 published releases

- Implemented CI/CD pipeline with GitHub Actions for automated Android builds

Project Nebula | *Node.js, Discord.js, Inquirer.js*

Mar. 2025

- Built a CLI tool that replicates Discord server structure — channels, roles, and permissions — via the Discord API
- Handled asynchronous operations and event-driven workflows for reliable bulk cloning

Project Monteria | *Node.js, discord.js-selfbot-v13, Tesseract.js, pokehint*

2025

- Built an autocatcher for Pokétwo#8236 that detects spawns, solves hints via OCR, and auto-catches Pokemon
- Implemented Pokemon switching logic to rotate party members when reaching target level
- Added spam and incense modes with XP booster management for efficient grinding

TalkShitGetDared | *TypeScript*

2025

- Built a zero-dependency TypeScript package for Truth & Dare prompts with NSFW/SFW modes, multi-language support, and difficulty filtering
- Published to npm with CLI support, history tracking, and batch prompt generation
